What amounts to a revolution in building design and construction is needed to adapt to higher temperatures and climate extremes; also to ensure much higher energy efficiency. Peter Smith not only urges the need for change but, from his wide knowledge and experience, tells us how to change. Anyone connected with buildings will find this book an invaluable mine of information. 'Future-proofing' homes: Anticipating future challenges and building to withstand them. While it is impossible to know exactly what the future holds, some of the earlier predictions about the impacts of climate change are already happening, and modern building practices should reflect that.
