

Download Factors Associated With Parents' Understanding Of Their Child's Cancer Prognosis

Research has shown that parents tend to overestimate their child's cancer prognosis relative to physicians. The current study examined an integrated model that included parent adjustment, coping, and health literacy variables for its ability to account for differences in the accuracy of parents' understanding of their child's cancer prognosis. Factors Associated with Parents' Understanding of their Child's Cancer Prognosis . By Kimberly Suzanne Miller. Topics: Oncology, Psychology, parent, childhood cancer ...OBJECTIVES: To determine which prognostic information sources parents find informative and which are associated with better parental understanding of prognosis. METHODS: Prospective, questionnaire-based cohort study of parents and physicians of children with cancer at 2 academic pediatric hospitalsFathers' age may be important to their understanding of their child's cancer prognosis, but we did not find support for other factors related to prognosis literacy. Given the homogeneity of our ..., Factors Associated With Parents' Understanding Of Their Child's Cancer Prognosis.
